

QAC TEST STRIPS

Description

- **QAC TEST STRIPS**
- **QAC Test Paper is used to detect the strength of quaternary ammonium compounds in sanitizers. This test is ideal for the food service industry and testing three part sinks. QAC Compounds exhibit microbicidal activity to most microbes at 200ppm concentration. Test Range: 0-500 ppm.**
- **There are many different QACs found in disinfectants or cleaning products. The most commonly used QAC disinfectants are the benzalkonium chlorides, also known as alkyl dimethyl benzyl ammonium chlorides (Figure 1).**

Abbreviations for benzalkonium chloride include BAC, BZK, BKC, and ADBAC
